

RK

Ram Likith Kongara

Professional Summary

Driven problem-solver with passion for designing innovative software solutions. Developed robust technical skills in collaborative and fast-paced tech environment, focusing on creating and improving software systems. Adept at problem-solving and critical thinking, with proven ability to learn new technologies quickly. Seeking to apply these transferrable skills in new field to drive innovation and efficiency.

Work History

RTR Group Inc - Software Developer

Arlington, Texas

12/2024 - Current

- Designed, developed, and maintained scalable software solutions aligned with business and warehouse operations objectives
- Configured and supported Manhattan Active Warehouse Management (MAWM) modules
- Implemented efficient algorithms and optimized system performance to improve processing speed and operational efficiency
- Developed applications and backend solutions using Java, Python, and SQL
- Applied data structures and software engineering principles to build robust and reliable systems
- Designed and implemented RESTful APIs to enable seamless integration between WMS, MHE/WCS/WES, and external systems
- Collaborated with cross-functional teams including operations, business analysts, and warehouse stakeholders to deliver end-to-end solutions
- Performed root cause analysis, debugging, and performance tuning to resolve production issues and system defects
- Contributed to system architecture design, scalability improvements, and warehouse process optimization
- Participated in the full SDLC including requirement gathering, design, development, testing (SIT/UAT), and deployment
- Led development of key features and enhancements aligned with business and fulfillment requirements

Skills

Object Oriented Programming: C, C++, Java, Python

Web Development: JavaScript, HTML, CSS, React, Node.js, Machine Learning, Agile, Robotics Process Automation (RPA), Blockchain.

Database: MSSQL, Oracle SQL, MongoDB

Data Science: Python, R, Pandas, Matplotlib, Predictive Analysis, Tableau

Software debugging

Advanced WMS/domain skills

Technical integration skills

Cloud/data skills

Problem-solving

Education

Expected in 12/2027

Cumberland University

Lebanon, TN

Master of Science: ENGINEERING MANAGEMENT

- Optimized application and WMS performance by analyzing bottlenecks and improving processing efficiency
- Worked closely with stakeholders to translate functional warehouse requirements into technical solutions
- Supported integrations and validations using tools like Postman and SQL queries for data verification

Vison Technologies Inc - Junior Software Developer

Austin, Texas

06/2023 - 12/2024

- Assisted in design and development of software applications under senior guidance
- Wrote and modified code using Java, Python, and SQL
- Participated in debugging and troubleshooting issues
- Supported database operations using SQL/MySQL
- Worked with Manhattan WMS to support warehouse operations
- Collaborated with teams to understand requirements
- Created basic reports and data visualizations
- Documented code changes and workflows
- Participated in code reviews and team meetings
- Gained experience in SDLC including testing and deployment
- Continuously improved technical skills and knowledge

05/2023

New Jersey Institute of Technology

Newark, New Jersey

Master of Science: Information Systems

- 3.6 GPA

06/2021

GITAM University

Hyderabad, India

Bachelor of Technology: Computer Science

- 3.4 GPA

Specializations/Certifications

- Coursera: Python For Everybody, Machine Learning Specialization, Supply Chain Logistics, Entrepreneurship
- IBM: Getting Started with Enterprise-Grade AI
- Automation Anywhere: Robotics Process Automation Specialization
- LearnQuest: Cloud Computing Basics
- Google: Google cloud Apigee API
- AWS: Blockchain Technology
